**Updated Oil Volume:**

**Updated Salt Water Volume:**

**Updated Other Volume:**

**Updated Other Contaminant**

**Notes:**

8/14/13 - 19:30 on location. Based on report, could not find indication of reported liquid leaving the well pad, into farmer's field. Called Mark Bonnie to determine what had transpired. He related that the treater had flowed oil to the flare pit, and thus sprayed into the farmer's wheat field to the west, over a high bank. Farmer has been contacted and will inspect the crop damage on 8/15 with Mr. Bonnie. Observed mist area is on high ground, on thick wheat stand, and unlikely to result in soil damage after impacted wheat is remove, as is planned by Mr. Bonnie. No further inspection is necessary.
